

## Vigil Systems

Vigil Systems develops, sells and supports technologies for training professional vehicle drivers, including transportation, fleets, Mining, Fire & Emergency Response, and Airports. Vigil Systems is a Queensland-based company with customers throughout Australia, USA, Canada, Singapore, and Hong Kong, providing training solutions that are used to **increase safety, reduce risk and improve driver performance**. Vigil's training systems have been used to train thousands of drivers across a number of transport fleets and have reduced the cost and severity of accidents by as much as 76 percent. Vigil customers have experienced dramatic reductions in claims costs, fatalities and passenger injuries.

### VigilVanguard – on-road driver training and evaluation system

VigilVanguard is an on-road driver training and evaluation system used to identify and correct unsafe driving behaviour. The system uses advanced technology to objectively measure and record driver performance during an on-road training session. VigilVanguard is a powerful training tool, which allows for an unbiased assessment of a driver's performance. The system is highly portable, and can be quickly installed into any vehicle.

### VigilPassenger – portable driver assessment tool

VigilPassenger is a portable driver assessment tool which can be used by supervisors and management to accurately document and provide feedback on driver performance. VigilPassenger eliminates paperwork and significantly improves the quality and efficiency of driver evaluations, producing an instant summary report on individual driver performance. VigilPassenger is a powerful risk management tool, used to improve the quality and consistency of driver evaluations.

### VigilManager – driver risk management database

Fleet services, like other service providers, face some kind of risk every day, including vehicle damages and passenger liabilities. VigilManager helps to improve safety and reduce liability by exercising more control over individual driver behaviour to reduce the likelihood of losses. VigilManager is used to benchmark drivers across organisations to improve driving standards and reduce the costs and risks of unsafe driving.
